

# Otari NAB Adapters

There are several types of Otari NAB adapters, but this article is about this one:

[image.png](#)

These adapters have a rubber belt along the side that is often broken after all three years. I measured the dimensions of the belt and here it is:

width:	7 mm
thickness:	1,5 mm
folded in half:	~ 100-105 mm
diameter:	~ 64 mm
circumference:	~ 200 mm
radius:	~ 32 mm

Also beware of the 6 (3x2) small pucks that can -and will!- fall out when you remove the rubber belt.
