

# Clear recently used documents permanently in KDE4

To do this:

solution: type in terminal

```
rm ~/.kde4/share/apps/RecentDocuments/*  
chmod 000 ~/.kde4/share/apps/RecentDocuments
```

The first line will clear the directory where the shortcuts to the recent files would be stored

The second line will make the directory where the shortcuts to the recent files would be stored, non-writable, so no history is recorded...
