

Fixing CUPS login problems on SUSE

Fixing CUPS login problems on SuSE

SUSE: What Password Do I Use At The Web Interface?

SuSE defaults to using Digest passwords and "RunAsUser yes", which means you have to use the `lppasswd` command to add accounts and passwords.

To add a user named Steve:

```
lppasswd -a Steve
```

Then enter and confirm a password.

SUSE does not follow the normal CUPS defaults and the `lppasswd` information doesn't follow changes to the normal accounts, causing a lot of confusion.

Any problems using this set up should be addressed to SUSE.

To set SUSE to the standard default settings of CUPS:

- 1) Goto `/etc/cups/cups.conf`
- 2) Change in the `AuthType`: `AuthType Basic`
- 3) Change `RunAsUser` to `No`.
