

# How to repair a crashed table

I had a crashed searchindex table in my MediaWiki, so I:

- Connect to the server

```
#mysql -u root -p
```

- Connect to the database

```
mysql> use wikidb;
```

- check data

```
mysql> check table searchindex;
```

```
+-----+-----+-----+-----+
| Table           | Op    | Msg_type | Msg_text          |
+-----+-----+-----+-----+
| wikidb.searchindex | check | warning  | Table is marked as crashed |
| wikidb.searchindex | check | status   | OK                 |
+-----+-----+-----+-----+
2 rows in set (0.24 sec)
```

- fix it

```
mysql> repair table searchindex;
```

```
+-----+-----+-----+-----+
| Table           | Op    | Msg_type | Msg_text          |
+-----+-----+-----+-----+
| wikidb.searchindex | repair | status   | OK                 |
+-----+-----+-----+-----+
1 row in set (0.21 sec)
```
