

# Problem w/ ZEN/rug/rpm database

""Problem w/ ZEN/rug/rpm database

*this problem is obsolete, it happened with OpenSUSE 10.2 and is no longer an issue in 10.3*

Things to try when your openSUSE gets errors with the package database:

```
rm -rf /var/tmp/* && rczmd restart && rug refresh
```

works around the problem. I'm not sure how to reproduce it though. It seems to happen randomly.
