

Starting chromium as default browser in thunderbird

Thunderbird seems to always start firefox when a link is clicked. This is bad behaviour.

The following command will start chromium:

```
gconftool-2 --type string -s /desktop/gnome/url-handlers/http/command "/usr/bin/chromium %s"
```

This works also in KDE

other solution: jan 2012

Nothing helped, so I've found other solution:

1) in Thunderbird go to Edit -> Preferences -> Advanced -> General -> Configuration Edito

2) change

network.protocol-handler.warn-external.http and

network.protocol-handler.warn-external.https

to "true"

3) Click on any link in tb

4) navigate to /usr/bin/google-chrome

5) have fun
