

Use yt-dlp the correct way for music files

Use:

```
-f bestaudio  
-f ba --extract-audio --audio-format flac
```

for best audio quality.

```
-o "%(title)s.%(ext)s"
```

for correct naming of the files.

```
--add-metadata
```

for correct IDs.

```
--parse-metadata "playlist_index:%(track_number)s"
```

for parsing track numbers.

```
--embed-thumbnail
```

This instructs yt-dlp to embed the thumbnail image in the downloaded audio file.

You can use youtube URLs to download complete album in one go:

```
#yt-dlp -f bestaudio -o "%(title)s.%(ext)s" --add-metadata --parse-  
metadata "playlist_index:%(track_number)s"  
https://www.youtube.com/playlist?list=0LAK5uy\_nBJgNLqUL8A64tQMKFNPk3x7KzN0gfbUw
```

Embed thumbnail in opus music files

```
#ffmpeg -i audio_file.opus -i thumbnail.jpg -c:v mjpeg -c:a copy -  
metadata:s:v title="Album Art" output_file.opus
```
