

# Wine

## Installing Newsleecher in Wine

As for installing your licence, I recommend exporting the registry key from your Windows install, edit the first line in it where it says 'Windows Registry Editor Version 5.00' and change it to 'REGEDIT4'.

Then open a terminal and type 'wine regedit'. In the registry editor, choose file, import and point to the exported registry file. You can also manually enter every key in the registry, copying the data from Windows to Linux.

- The key is located in HKLM\Software\05970870
- Search for your Licence ID. Found in Help > About. Be sure to untick 'match whole string' when searching the registry. It's 'swXXXXXXXX'.
- Not all licenses start with sw. Some start with DI or NL.
