

# Codecs issues 11.1

SUSEhelp: vlc-conflicts is (should be solved nowadays)

Do *not* use the Videolan repo in conjunction with the Packman repo, as this will break your ability to play video. To fix your video problem, disable the Videolan repo and replace any Videolan packages with those from the Packman repo. The only "safe" Videolan package is libdvdcss.

List:

```
rpm -qa --qf '%{VENDOR} %{NAME}-%{VERSION}-%{RELEASE}\n' |grep videolan
```

---
