

Enhancing the GroupWise Client on Linux

How to speed-up and improve the GroupWise linux client appearance

When you want to improve the GroupWise linux client appearance, make a launcher icon and enter the following command:

```
/opt/novell/groupwise/client/bin/groupwise -ui=gtk
```

And now the java-look has been replaced by a (slightly better looking) GTK look!

This tip will speed up the GroupWise Linux Client by switching it over to GTK. Give it a shot and see what you think.

1. From the SLED10 console do the following:

```
SU {enter admin password}  
cd /opt/novell/groupwise/client/bin  
vi groupwise
```

2. Modify this:

```
/opt/novell/groupwise/client/bin/groupwise-bin "$@"
```

so that it says this:

```
/opt/novell/groupwise/client/bin/groupwise-bin -ui=gtk "$@"
```

3. Save changes and exit.

GroupWise will now run from the menus in GTK mode.
