

# OpenSUSE 11.1: enable the KDE4.2 repos

When you're running openSUSE 11.1, and you want to use the KDE 4.2, just add these repo's and do a full update:

```
zypper ar --refresh http://download.opensuse.org/repositories/KDE:/42/openSUSE\_11.1/ kde42
zypper ar --refresh http://download.opensuse.org/repositories/KDE:/KDE4:/Community/openSUSE\_11.1\_KDE\_42/ kde42-community
zypper ar --refresh http://download.opensuse.org/repositories/KDE:/KDE4:/Playground/openSUSE\_11.1\_KDE\_42/ kde42-playground
```

After that you can do a full refresh and update all:

```
zypper ref -f && zypper up -t package
```

Sometimes a distro upgrade is needed (only in rare cases)

```
zypper dup
```

## Overview of repos

At this moment the collection of repos is as follows. Remember that this may change over time.

#	Alias	Name	Enabled	Re
fresh	Priority	Type	URI	
	Service			
-----+-----+-----				
+-----+-----+-----				
+-----+-----+-----				
+-----
